Remote, US | (980) 825-2081 | srikarmanikonda9@gmail.com

PROFESSIONAL SUMMARY

Analytics Engineer with an M.S. in Computer Science (Data Science) and **2+ years** designing, developing, and maintaining **analytical ETL pipelines, BI dashboards, and data quality frameworks in SQL, Python, and AWS Redshift**. Experienced in **data modeling, data warehouse methodologies, and QA protocols** — proactively identifying and resolving data quality issues to ensure analytical solutions perform reliably for Sales, Finance, and Operations stakeholders. Strong collaborator who maintains comprehensive documentation to support scalability and knowledge transfer, and builds self-service data tools that empower non-technical users.

TECHNICAL SKILLS

Data Engineering: SQL (Advanced), Python, ETL/ELT Pipeline Development, Data Modeling, Data Warehouse Methodologies, AWS Redshift, PostgreSQL, MySQL, MongoDB, Query Optimization

BI & Visualization: Tableau, Power BI, KPI Dashboard Development, Self-Service Reporting, Ad-Hoc Analysis, Data Visualization, Executive Reporting

Data Quality & Governance: QA & UAT Protocol Development, Data Validation, Source-to-Target Reconciliation, Schema Normalization, Anomaly Detection, Data Integrity Testing

Tools & Platforms: Snowflake (concepts), dbt (concepts), Python, R, Bash, Git, Docker, Linux, AWS (EC2, S3, Glue), GCP BigQuery, CI/CD

Collaboration: Technical Documentation, Stakeholder Enablement, Cross-functional Communication, Knowledge Transfer, Process Improvement

PROFESSIONAL EXPERIENCE

Inmar Intelligence

Analytics Engineer — Data Pipelines & BI

Oct 2023 – Jul 2024

- **Designed, developed, and maintained analytical ETL pipelines in Python and SQL on AWS Redshift** — ingesting, transforming, and reconciling data from 10+ source systems processing **500K+ records per cycle** and powering downstream BI dashboards and ad-hoc reporting for Sales, Finance, and Operations leadership.
- **Contributed to QA and UAT protocols** by implementing rigorous data validation frameworks — running schema checks, null-rate monitoring, and source-to-target reconciliation that proactively identified and resolved data quality issues, improving data accuracy from **72% to 94%** across production analytical systems.
- **Developed and maintained Tableau and Power BI dashboards** as front-end interfaces to analytical pipelines — enabling Sales, Finance, and Operations stakeholders to self-serve insights and track KPIs without needing to query data directly.
- **Supported data users through training and documentation** — maintained comprehensive pipeline documentation, validation rules, and debugging procedures that enabled team members to independently use and maintain analytical solutions, reducing escalations and improving knowledge transfer.
- **Optimized ETL pipeline performance** by reviewing SQL execution plans, identifying full table scans, and restructuring joins — reducing query runtimes by **30–40%** and improving the reliability of analytical reporting workflows across 4 business teams.

Analytics Engineer Intern — Pipeline Automation

Aug 2022 – Oct 2023

- **Developed and maintained ETL pipelines and reporting automation** — replaced 12+ manual Excel-based workflows with Python and SQL pipelines, reclaiming **15+ analyst hours per month** and eliminating recurring data errors impacting downstream BI solutions.
- **Built analytical dashboards in Tableau and Excel** following data visualization best practices — empowered non-technical stakeholders across Sales, Operations, and Finance to independently explore performance metrics and surface insights.
- **Maintained comprehensive documentation** for pipeline logic, data models, and validation rules — ensuring scalability and knowledge transfer across the analytics organization so solutions could be maintained and extended independently.

EDUCATION

University of North Carolina at Charlotte

Aug 2024 – May 2026

Master of Science in Computer Science, **Data Science Concentration**

GPA: 3.80

PROJECTS

End-to-End Analytical ETL Pipeline & BI Dashboard Suite — *SQL, Python, AWS Redshift, Tableau, Power BI, Data Modeling*

- **Designed and implemented an end-to-end analytical ETL pipeline** consolidating 3 years of structured data from multiple source systems into a warehouse-ready data model — powering **Tableau KPI dashboards** adopted by 3 business units for strategic planning and executive reporting.
- **Developed advanced analytics prototypes** using XGBoost regression and statistical modelling to drive forecasting and segmentation initiatives — enabling **30% more efficient** resource allocation and delivering actionable insights to business stakeholders.

Data Quality & Pipeline Validation Framework — *Python, SQL, ETL, QA Protocols, Data Governance*

- **Built a reusable QA and UAT validation framework** running automated schema checks, null-rate monitoring, anomaly detection, and source-to-target reconciliation — proactively identifying data quality issues before they reached front-end dashboards, improving data integrity from **72% to 94%**.
- **Documented data models, pipeline logic, and validation thresholds** to support scalability and knowledge transfer — enabling the analytics team to independently maintain and extend the framework across 6 business units.

Customer Segmentation & Retention Analytics Platform — *SQL, Python, R, Tableau, Statistical Analysis, Segmentation*

- **Developed advanced analytics prototypes** using K-Means segmentation, RFM analysis, and Gradient Boosting on 500K+ records — surfacing behavioral patterns across 5 revenue cohorts, projecting **18% uplift in retention ROI** and directly informing a **\$80K+** strategic initiative.
- **Built automated Tableau dashboards and batch scoring pipelines** enabling stakeholders to act on insights **14 days earlier** — translating complex model outputs into clear, actionable front-end interfaces for non-technical business users.
